

Elijah-Christian Wiegand

SOFTWARE ENGINEER

wiegand51@gmail.com | +1 (631) 704-2281 | Portfolio | GitHub: ECdub27 | LinkedIn

Summary

Full Stack Engineer with 4+ years of production experience across React/TypeScript, Java, and .NET. I pick up new codebases fast and ship real work. In my first 4 months at my last role I closed 67 tickets and peaked at 28 story points in a single sprint. I also designed internal tooling that took 40% off a major operational process. I move fast, I do not need my hand held, and I care about the product actually working.

Experience

Independent / Contract — Planet Euphoria Remote

Full Stack Engineer. January 2026 – Present

- Built and deployed a production Python (FastAPI) application server integrating Shopify's Admin GraphQL API, exposing REST endpoints for a server-priced checkout flow with variant validation, collection-based eligibility gating, and line-level discounting.
- Implemented the application security layer end to end: OAuth 2.0 client-credentials token minting with cached refresh, HMAC-SHA256 request-signature verification with constant-time comparison, timestamp replay protection, and fail-closed CORS.
- Engineered the storefront in React 19 + TypeScript with a Three.js 3D pack-opening experience, cutting bundle size ~50% by migrating from IIFE bundles to ES modules.
- Containerized the service with Docker and automated delivery through GitHub Actions CI/CD to a managed cloud host, with isolated dev/prod environments and Playwright (e2e), k6 (load), and Lighthouse CI (performance) test suites.

Preferred Risk Insurance Chicago, IL

Software Engineer. June 2024 – January 2026

- Designed PRISConfig, a metadata-driven configuration platform that let the business update billing rules and onboard new states without a code deployment. Cut new-state onboarding time by 40% across 9+ markets.
- Delivered 67 tickets (75 story points) in the first 4 months on the React/TypeScript frontend, peaking at 28 story points in a single sprint.
- Sustained 8 to 12 tickets per sprint across billing, forms, rating, and AR while hitting velocity targets in a complex legacy codebase.
- Responded to 4 production incidents on live financial paths covering invoicing, cancellation fees, and premium finance, all resolved same-day with zero downtime across state launches in TN, OH, WI, and AZ.
- Built a Node.js/Vite microservices UI layer that integrated with enterprise business systems via Swagger-documented RESTful APIs, enabling internal access to backend services without direct system coupling.
- Reverse-engineered undocumented third-party billing integrations and wrote the first internal documentation anyone had produced for those systems.

24 Hour Medical Staffing Services, LLC Remote

Front End Developer / System Admin. August 2021 – May 2024

- Supported the company's React and JavaScript web presence, contributing to frontend updates and site maintenance.
- Administered LaborEdge and Nexus recruitment platforms, resolving sync issues between frontend and backend data and keeping platform records accurate.
- Wrote Python scripts to cut down on manual admin overhead and supported SQL and NoSQL database operations across the team.

CodeWizardsHQ. Remote

Software Developer / Coding Instructor. October 2023 – October 2024

- Taught Python, JavaScript, and HTML/CSS. Designed custom labs that hit an 84% average class pass rate.

Projects

Connected Services Platformgithub.com/ECdub27

Personal Project 2021 – Present

- Full-stack microservices platform using Next.js, Java, and PostgreSQL. Connects a financial planning assistant, music key detection tool, and media player under one frontend.
- Service-oriented backend with RESTful APIs handling state management and orchestration across independent services.

Skills

Languages: Java, C#, JavaScript / TypeScript, Python, SQL

Frontend: React, Next.js, Angular, HTML/CSS, Razor Pages, Responsive Design

Backend: .NET Core, Spring Boot, REST APIs, SOAP, Async Processing

Databases: SQL Server, PostgreSQL, MongoDB, JDBC

Tools: Git, Docker, Azure, Jira, Postman, Swagger, DBeaver, Gradle

Practices: OOP, CI/CD, Agile/Scrum, Root Cause Analysis, Legacy Refactoring

Education

SUNY Buffalo State Bachelor's Degree Computer Science

Professional Certificates (Codecademy by Skillsoft): Full Stack Development Engineer | Java | Python | C#/.NET
